

The screenshot displays the MIT App Inventor Designer interface. On the left, the Designer view shows a smartphone screen titled "Password" with the text "Enter your password" and a redacted password field. A "Submit" button is located below the field. On the right, the Project Explorer lists components: "Screen1", "Label1", "PasswordTextBox1", and "Button1". Below the project list are "Rename" and "Delete" buttons. Under the "Media" section, there are two files: "gatito.jpeg" and "gatico-c_uito-.mp3", with an "Upload File ..." button.

The bottom half of the interface is the Blocks Editor, showing the script for "Button1.Click". The script consists of:

```
when Button1 Click
do
  if PasswordTextBox1.Text = "1234" then
    open another screen: Screen2
  else
    set PasswordTextBox1.Text to "Error"
```
